

AMENDMENT(S) TO THE SPECIFICATION

Please replace the paragraph [0052] beginning at page 9, line 7, with the following rewritten paragraph:

[0052] FIG. 4C shows a superimposed scroll display mode in which when a panoramic image 80 is scrolled and displayed in a normal size, a superimposed display 90 is performed in the display area 70 to indicate which portion of the image 80 is currently displayed therein. In this mode, the superimposed display 90 allows a user to confirm which portion of the panoramic image is currently displayed (e.g., which image is displayed), at first sight. In other words, the superimposed display 90 constitutes an indicator portion that indicates what frame of the panoramic image is being shown. Consequently, the user need not perform any unnecessary operation and the apparatus is improved in operability.
